

# SAFETY TUBS<sup>®</sup>

## Selecting The Proper Tub Configuration

When facing the tub from the door side of its intended location, if the faucet and drain needs to be on the left, select the left hand tub. With the left hand tub, the built-in seat will be on the right side when facing the tub from the door side. If the faucet and drain needs to be on the right, select the right hand tub. With the right hand tub the built-in seat will be on the left side when facing the tub from the door side.

If the door is obstructed due to a plumbing fixture; all Safety tubs are designed to allow for above floor installation to reverse the plumbing of your tub (i.e. faucet needs to be on the right but plumbing must come from the left).
