Safety Tubs' Patented T5 Door System Ensures Waterproof Performance for Life

Safe and Effortless Entry, Watertight Seal Guaranteed for Life

Dallas, TX — The original inventor and manufacturer of the first acrylic walk-in bathtub, Safety Tubs' innovative design and technology make it easy to get in and out of the bath.

The company's patented T5 door system eliminates the need to step over the front of the tub, allowing for safe and effortless entry. Walk in, close the door and relax in the luxurious bathing environment.

Installed as a pre-hung door unit, the T5 door system technology ensures manufacturing consistency and reliability in every tub.

Safety Tubs patented T5 door system eliminates the need to step over the front of the tub, allowing for safe and effortless entry.

Features of this patented system include:

- A strong, powder-coated aluminum frame and hinge maintains structural integrity by preventing the tub from warping or twisting over time due to moisture changes in the bathroom. The frame is tested to support over 350 pounds.
- An ingenious Santoprene seal runs the length of the entire door edge and sits snugly against the door frame, which ensures a watertight seal. When compressed by the closing door, the seal is flattened against the frame, creating a watertight

- more -

boundary. As water fills the tub and the water pressure against the door increases, the weight of the water further compresses the tube, creating an even tighter seal and preventing any water leaks. Unlike other systems available, the T5 technology allows the user to easily replace the seal by removing it from the dedicated track if a replacement is ever needed.

- The ergonomically designed T5 door handle allows for easy opening and closing regardless of physical strength or condition. The unique handle system includes a stainless steel sloped strike plate that provides full leverage and insures a secure closure.

“We are so confident in the integrity of our door system, we guarantee the watertight seal for life,” said Andre Neidich, Principal of Safety Tubs. “We’ve created a watertight system that requires no special care or maintenance to make bathing safe and easy for millions of people. Walk-in tubs can help many people feel better while maintaining their independence and dignity. We take that responsibility seriously and continually innovate to make the entire process better: from sales to installation to the bathing experience to maintenance.”
